

Hello,

We are introducing our latest and greatest 3rd version of our successful retractable screens, "The Shadow". The ultimate door and window retractable screen system.

Retractable screens have several advantages:

- Screen is retracted during installation, avoiding accidental punctures.
- Screen is protected from the elements when not in use, longer life.
- Clear view when screen is retracted.

We have redesigned our retractable screen with three major improvements.

- Wider screen, goes deeper into the tracks,
- Lower profile to offer more viewing area and enables better application to windows.
- A design that enables retractable screens to be trimmed to size at the site.

With the new design, we are able provide resellers, distributors and installers with a standard length retractable screen. They take the retractable screen to the site, measures and then cut the retractable screen to size using simple tools. This enables an installer to make a one stop visit. A major advantage and costs savings.

The design is simple, we use high quality non rusting parts. This ensures long lasting operation with very minimal maintenance. Very low call backs resulting in satisfied customers.

We are looking for interested quality companies in promoting and installing our product. We feel you have the knowledge of your customers and understand your market the best. This is why there is a high profit margin for you. We focus on what we do best in the area we know, design and manufacturing.

For more information, please visit our website www.shadowscreens.com or contact myself and I will gladly drop by for a visit. Our website is still under construction. If there is anything you would like to see on our website, or anything that you feel would improve the site, please let us know.

Kindest regards,

Scott Burgess
